

FULL STACK WEB DEVELOPMENT (MERN)

WEEK 3 – Full Stack Integration (Connecting Frontend & Backend)

Topics Covered

- Connecting React frontend with Express backend
- Axios / Fetch API for data communication
- React Router and protected routes
- Context API or Redux for state management
- Form validation and file upload (Multer)

Assignments

1. Full Stack To-Do Application

- Connect Week 2 API with React frontend.
- Implement authentication, CRUD functionality, and routing.

2. Image Upload Feature

- Create a file upload endpoint using Multer.
- Integrate with React to preview and display uploaded images.

Mini Project

Task Manager Application

- A complete task tracking web app with user login and task filtering.
- Frontend in React, backend in Express, and MongoDB for storage.

Learning Outcome

Students gain end-to-end experience of connecting frontend and backend with a database.
